Synopsis

Eruption 1991/93.

Local earthquake accompanied the opening, on the east side of the volcano, of a big fracture at the height of 2400 m. on the sea level, from where began the biggest eruption of the last 300 years. It risked to destroy Zafferana after having met many rural houses. It was tried to deviate the flow and for the first time in the history of the man we succeeded totally deviating a flow from its path.
